

Xtract Injection System

Allergen Immunotherapy Software

The Xtract Injection System (XIS) is an innovative electronic solution for managing allergy injections and patient traffic in your clinic. Incorporating advanced digital technology, Xtract Injection System allows patients to check in, answer questionnaire, get their shot, and check out quickly and effectively. It allows shot nurses to efficiently manage the flow of traffic to minimize patient wait time, and helps prevent error through safety checks such as fingerprint identification, barcode scanning of vials and cross-checking of treatment plans. If patients are near their window for missing an injection, automatic reminders are sent for them to come in to get their shot.

Fingerprint

Features:

- Innovative graphical shot record allows instantaneous evaluation of patient progress and the ability to adjust treatment plan as needed.
- Customized graphical injection history with treatment related metadata.
- Fingerprint based patient sign-in kiosk (no need for patient ID cards).
- Nurse dashboard automates traffic management.
- Barcodes on treatment vials and fingerprint reader confirm patient receives correct injections and all injections scheduled.
- Integrated reorder / reformulation of vials directly to XPS from XIS.
- Optional waiting room monitor lets patients know remaining wait time before being excused.
- Customized reports provide daily shot lists for billing, track shot reactions, and list patients overdue for injections.
- Automatic patient reminders via text or email improve compliance and revenue.
