

Xtract Preparation System

Allergen Immunotherapy Software

The Xtract Preparation System (XPS) is a customized technology solution for the allergen immunotherapy bottle lab built to maximize workflow efficiency through streamlined data entry. This process confirms the accuracy of the mixing process using barcode verification, with a searchable, traceable record of patient serum bottles.

Features:

- Touch Screen interface streamlines the user experience and optimizes the workflow, yielding increased productivity.
- Dedicated medical grade hardware can be included directly in the aseptic field during compounding.
- Real time access to fully linked production, inventory and patient records to review or print reports. Integrated PDF creation for EMR upload.
- Barcoded stock vials and dosing scale allow confirmation of each drug selection and dose attribution, reducing the risk of human error.
- Automatic document generation including all vial labeling, prescription sheets, compounding records, and any other custom clinic forms necessary.
- Interactive patient records show full history of prescriptions, and automates the preparation of dilution and maintenance vials for reorder.
- Coded, custom "Life Sciences" rated vial labels won't have letters rub off when wet and provide linked allergen, lot number, and out-date information for each vial.
